

VERICO Funds Unlimited chooses MorWEB for mortgage origination and customer management

July 5, 2006 — Marlborough Stirling Canada (MSC) is pleased to announce that VERICO Funds Unlimited have selected MSC's MorWEB system for mortgage origination and customer management.

Chris Aleung, Manager of VERICO Funds Unlimited, says: "We really like the concept of MorWEB, how it's all about accessibility. We can sign on to the system from anywhere and engage in immediate correspondence with the selected lender, with the ability to see instantaneous status updates as each deal progresses. This nicely compliments our strategy to go anywhere for the deal, because everything we need to create, model and submit an application is completely web-based and available to us at any time, regardless of location."

"The improvements that MorWEB can offer brokers in terms of productivity, efficiency and communication make it easy for brokers to handle much higher volumes in less time and with less effort," says Scott Baldwin, MorWEB's Regional Director for Eastern Canada. "We make sure your data is secure and available to you whenever and wherever you need it so that you can focus on your clients instead of your technology."

"Marlborough Stirling Canada's support and training have also been first rate," says Chris Aleung. "The system is very easy to learn, the navigation is simple, and the support team has a good understanding of what we need to know so we can become immediately productive on the system. This high service standard is a refreshing change and something that will become an even greater asset as we continue to grow our business. Marlborough Stirling Canada is a service provider that we can trust and rely on."

Dave Nichol, Director, MorWEB Sales, concludes: "We appreciate the support of VERICO Funds Unlimited as they join the growing number of brokerage firms using MorWEB as their preferred system, and we wish them the best. By selecting MorWEB they have the opportunity to capitalize on the benefits of a system that is a significant step forward in broker technology."
